

Create a Mapping shortcut?

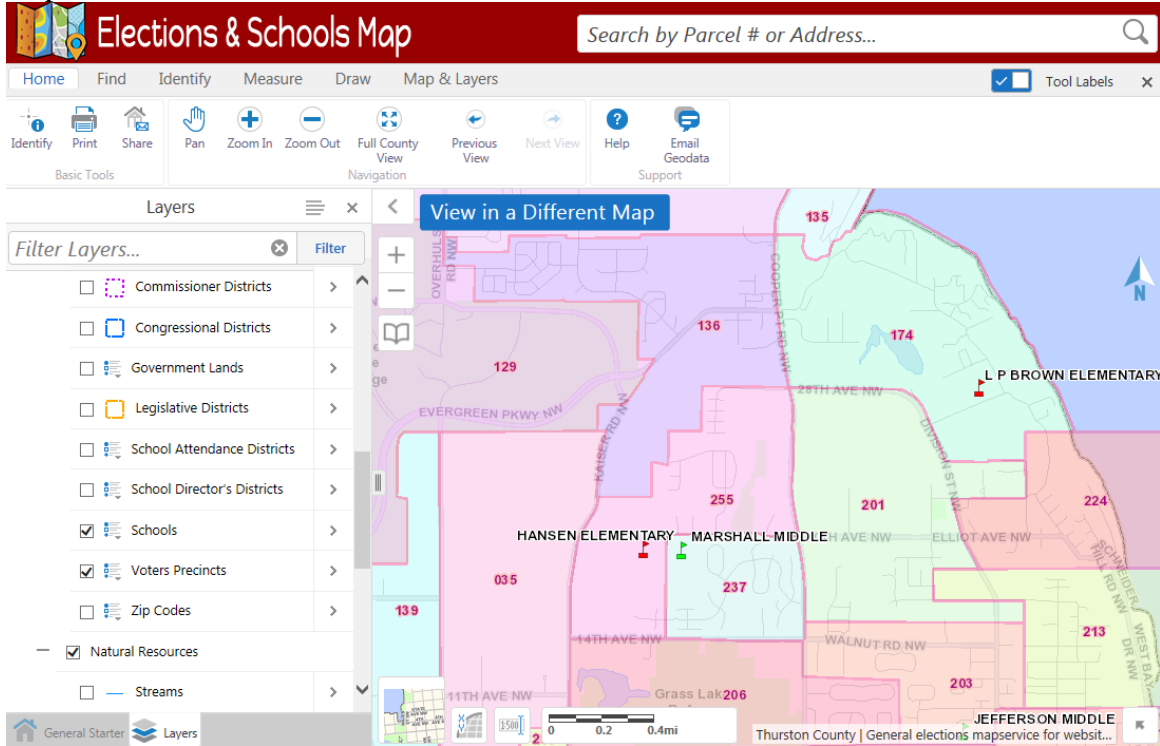

3/08/2018

If you save your map to favorites in your browser, it will save which data you have turned on, and where you are zoomed to on the map.

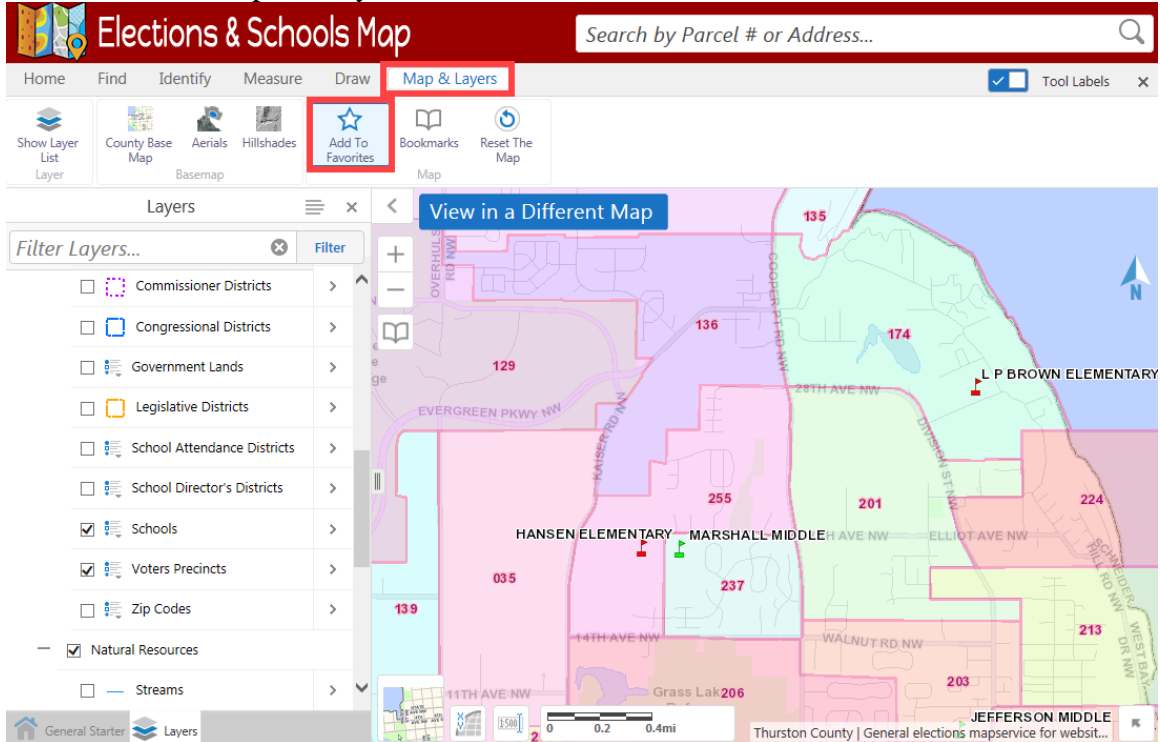

Open the map you are interested in, which has the data you need, and click on the Layers tab as indicated in snapshot.

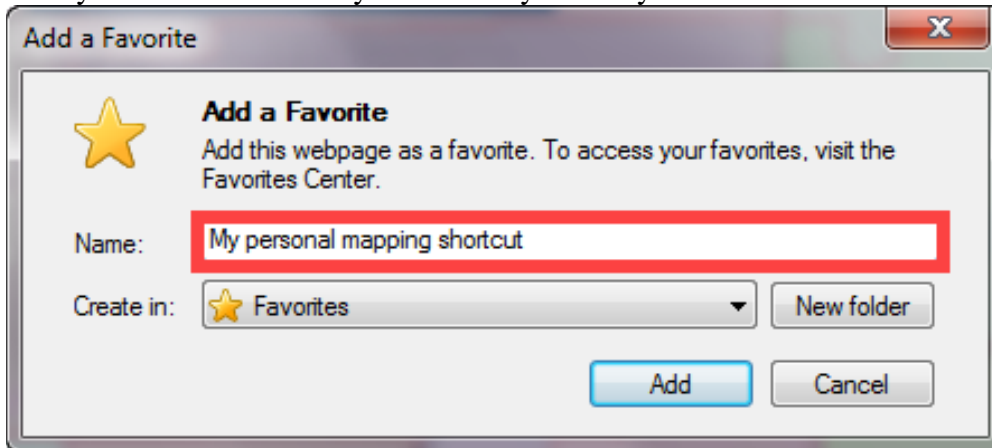

Zoom into the area you are interested in and turn on the layers you would like displayed on the map.

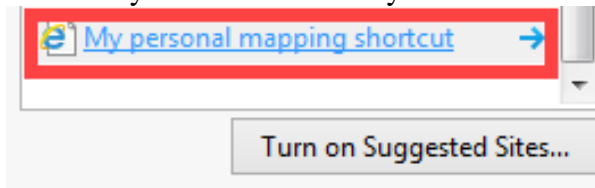

Now select the 'Maps & Layers' tab and 'Add To Favorites'

Give your shortcut a name you can easily find in you shortcuts browser list

Now anytime you open your browser, you can go to favorites and it will open the map with the desired layers and in the area you are interested in.

Please Note: Where favorites is located in your browser, depends on the browser you are using, but they all have a favorites option.
